Dear Kui Jiang,

In our work there are references to the works, and not only in the introduction, in which the features of the turbulent processes in the tail of the Earth's magnetosphere and their role in the physical processes that occur there are considered:

The analysis of the models is done because the analyzed events of the magnetic field dipolarization satisfy one of the models.

We understood that the symbol \( \div \) in LaTeX, is shown incorrectly for you. For us it’s shown correctly. To avoid this inconsistency, we will replace it with a “from . . . to . . .”. Thank you.

Best regards, Andrew.

2018.
